WORK EXPERIENCE

Tata Consultancy Services   **Remote, India**

Engineer II – American Express Group Client   Nov 2021 – Present
  • Financial Data Engineering
  • ProcessUnity Development
  • Agile Practitioner

Programmer/Developer II – American Express Group Client   Mar 2021 – Oct 2021
  • Worked with the data migration team to write and test Python scripts to automate the process of converting legacy data into the revised format.
  • Additional activities included having to retrieve legacy data, transform it using automation scripts and load the revised data into production.
  • Completed it within the deadline with zero discrepancies.
  • Briefly worked on Python scripts to simulate production scores.
  • Provided production support.
  • Technologies Used: Python, Pandas, JSON, ProcessUnity, Excel.

Initial Learning Program (ILP)   Jan 2021 – Feb 2021
  • ILP training was provided in C# and HTML/CSS/JavaScript and SQL technologies.

EDUCATION

Jain (Deemed-to-be University)   2021 – 2023
Master of Computer Application specializing in Full Stack Development   GPA: NA

Kishinchand Chellaram College (Mumbai University)   2017 - 2020
Bachelor of Science. Computer Science   GPA: 9.46/10
Activities: Tech Club, Kiran – Technical Team

PROJECTS

Air Hockey Android Game
  • Brining the classic arcade Air Hockey game now to your android device.
  • Objective of the game is to try and score goals by putting the puck in your opponent's goal.
  • Has single player as well as a local multiplayer mode.
  • The single player mode can be played at 3 levels of varying difficulty.
  • The local multiplayer mode lets you challenge and play with a friend on the same device.
  • Dynamic game sounds, victory animations and more.
  • Built in Unity using C#.

Expense Manager Android Application
  • An expense manager application to track income and expenses for better financial planning.
  • Provides various categories of expenses like Education, Food, Luxury, etc. to help categorize and manage expenses.
  • Displays all income and expense data entered systematically and allows the user to edit or delete it, if required.
  • Provides pie chart and bar graph analysis of income and expenses on a weekly, monthly and yearly basis.
  • Users can export PDF reports based on these analysis and share with others if needed.

- Created in Android Studio using XML and Java and is using a Cloud Firestore No-SQL database.

Python Discord Bot (Ferdinand)
- A discord bot written in Python using Discord.py and asyncio modules.
- It provides moderation features to kick, ban, mute and manage members with simple and convenient commands.
- Also, has an automatic profanity filter to delete messages that contain any sort of profanity automatically; to make moderation easier.
- Provides language translation for over 40 languages using simple commands.
- Moderators can start a random giveaway as well as a question-answer giveaway hassle free using one simple command.
- Provides a unique currency system of its own to play quick casino games like slots, roulette, blackjack and more.
- The use of the asyncio module helps achieve synchronous programming so that it can run on multiple servers parallelly.
- Hosted on Heroku and is using a PostgreSQL database.

SKILLS & INTERESTS

Technologies: Python, Java, SQL, C#, HTML, CSS, Android Development, JavaScript, Django (Most to Least Proficient)

Certificates: MTA Security Fundamentals, Developing AI Applications on Azure, Computational Thinking for Problem Solving, Digital MFDM™ AI Aware Certification, Process: ITIL Foundation Certification

Languages: English, Hindi, Gujarati, Marathi (Most to Least Proficient)

Interests: Gaming, Music, Chess, Cricket, Football, Badminton, Karting, Astrophysics, Planetariums
